The Float & Thermostatic Steam Trap

The More Your Steam Pressure Varies, the More You Need Armstrong F&T Traps

When steam pressure may vary from maximum steam supply pressure to vacuum, Armstrong F&Ts are your most energy-efficient choice. Our line of F&Ts brings Armstrong performance, dependability and long life to trapping services requiring continuous drainage with high air venting capacity. Thanks to separate orifices for condensate and air, they provide continuous condensate drainage and air venting – even under conditions of zero pressure.

All the benefits detailed below have been designed into Armstrong F&Ts through long experience in the manufacture of pressure float-type drain traps. They assure you of optimum operating efficiency for long periods with minimum trouble.

No water seal at inlet

Inlet high on body and condensate discharge valve in the bottom of the body prevent formation of a water seal that could block flow of air to vent under very low pressure conditions.

Optional integral vacuum breaker

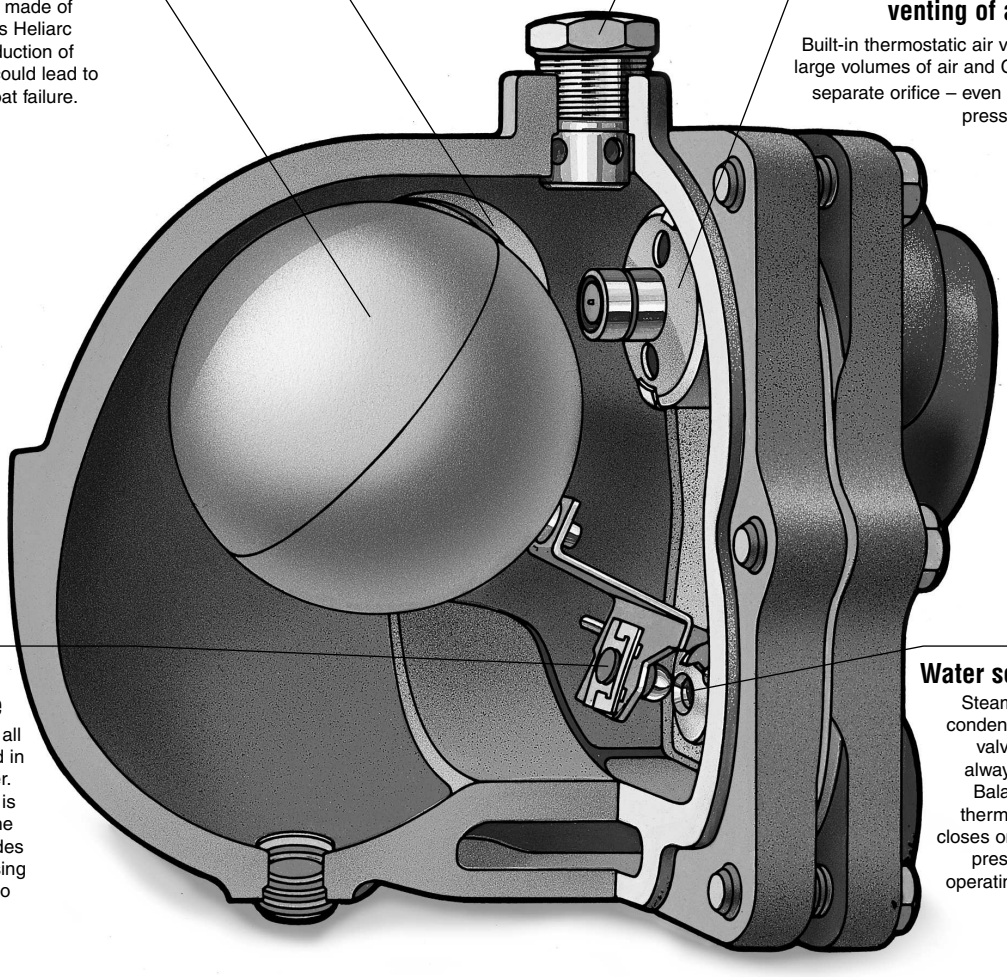
Provide maximum protection against freezing and water hammer in condensing equipment under modulated control. They also eliminate another fitting being installed in the line.

Corrosion resistance

Entire float mechanism is made of stainless steel. The float is Heliarc welded to avoid the introduction of dissimilar metals, which could lead to galvanic corrosion and float failure.

High-capacity venting of air and CO_2

Built-in thermostatic air vent discharges large volumes of air and CO_2 through its separate orifice – even under very low pressure conditions.



Long life and dependable service

Valve is stainless steel in all sizes. Seat is heat treated in 1 1/2" pipe size and larger. Rugged float mechanism is built to resist wear, and the stainless steel float provides exceptionally high collapsing pressure and resistance to hydraulic shock.

Water sealed valve

Steam cannot reach condensate discharge valve because it is always under water. Balanced pressure thermostatic air vent closes on steam at any pressure within the operating range of the trap.

Operation against back pressure

Trap operation is governed solely by the condensate level in the trap. Back pressure in the return line will not render the trap inoperative as long as there is any pressure differential to force condensate through the discharge valve.

Continuous drainage

No pressure fluctuations due to intermittent condensate drainage. Condensate is discharged at very close to steam temperature. No priming needed.

Float & Thermostatic Steam Trap

Built as Tough as the Jobs They Do

Armstrong float and thermostatic traps are unique in their super heavy duty construction. Armstrong uses high quality ASTM A48 Class 30 cast iron or astm A216 WCB cast steel – normally found in pressure vessels rated to 17 bar or 32 bar. Internal mechanisms are made from stainless steel and are heavily reinforced. No brass cotter pins here. Valves and seats are stainless steel, hardened, ground and lapped to withstand the erosive forces of flashing condensate.

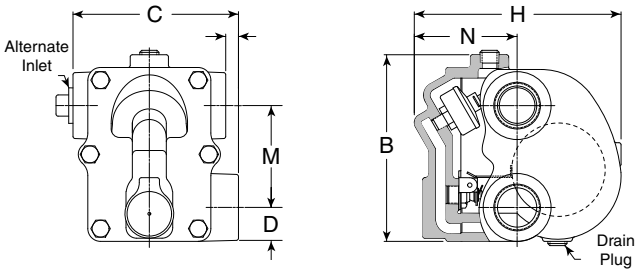
Why go to all this trouble on traps normally recommended for low-pressure, modulating service? The answer is in the word modulating. Modulating pressures mean widely varying loads, thermal cycling and high air and non-condensable gas loads.

In other words, tough service. Inferior, lightweight construction is a mistake waiting to happen. Trap failures on modulating pressure may lead to water hammer, corrosion and even heat exchanger damage.

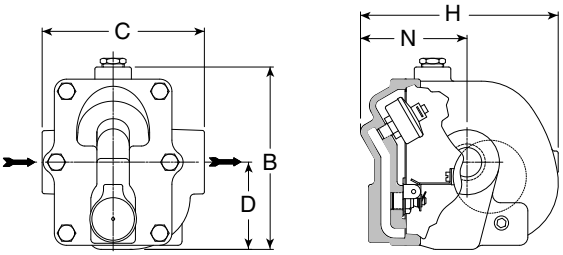
Armstrong's published capacities are based on actual measurements of traps handling hot, flashing condensate. Competitive F&Ts may utilize theoretical calculated capacities. Armstrong uses its own steam lab to give you actual capacity – especially important on high-capacity traps such as those in our ultra-capacity line. Not only does Armstrong offer super heavy duty construction for long life and reliability, but we also supply the data to back up performance. Here's a simple, easy-to-remember summary: The more your pressure varies, the more you need Armstrong F&Ts.

B and BI Series Float & Thermostatic Steam Traps

Cast Iron for Horizontal Installation, with Thermostatic Air Vent
For Pressures to 2 bar...Capacities to 4 040 kg/h



Model B Traps



Model BI Traps

Description

Armstrong B and BI Series F&T traps combine high standards of performance and long life with economy for heating service where continuous drainage with high air-venting capacity is required.

Because of the wide use of vacuum returns in systems of this type, the thermostatic air vent element is charged to give it the capability of compensated response to the pressure-temperature curve of steam at any pressure from less than 500 mm Hg vacuum to 2 bar gauge. B and BI Series F&T traps will vent air at slightly below steam temperature throughout this entire range of operation.

All B Series traps, except the 1/2" and 3/4", have inlet connections on both sides of the body to provide flexibility in piping. **The BI Series F&T** traps in sizes 1/2", 3/4" and 1" feature the convenience of in-line connections with the same internals as the B Series.

Maximum Operating Conditions

Maximum allowable pressure (vessel design):
- Model B2-B3: 8,5 bar @ 178°C
- Model B4-B8: 12 bar @ 192°C

Maximum operating pressure:
- 15B, BI: 1 bar saturated steam
- 30B, BI: 2 bar saturated steam

Maximum back pressure: 99% of inlet pressure

Note: Cast iron traps should not be used in systems where freezing, excessive hydraulic or thermal shock are present.

Connections

Screwed BSPT and NPT
Flanged DIN or ANSI (screw on) on request

Materials

Body and cap:	ASTM A48 Class 30
Internals:	All stainless steel – 304
Valve:	Stainless steel – 303 or 440
Seat:	Stainless steel – 303 (ASTM A582) Stainless steel – 440F in 1-1/2" and 2"
Thermostatic air vent:	Stainless steel and bronze with phosphor bronze bellows, caged in stainless steel

Options

Integral vacuum breaker. Add suffix VB to model number.

CAUTION: Do not use a conventional vacuum breaker open to the atmosphere in any system that incorporates a mechanical return system that carries pressure less than atmospheric pressure. This includes all return systems designated as vacuum returns, variable vacuum returns or subatmospheric returns. If a vacuum breaker must be installed in such a system, it should be of the type that is loaded to open only when the vacuum reaches a calibrated level well in excess of the design characteristics of the system.

Specification

Float and thermostatic steam trap, type ... in cast iron, with thermostatic air vent. Maximum allowable back pressure 99% of inlet pressure.

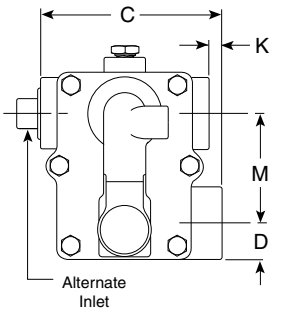
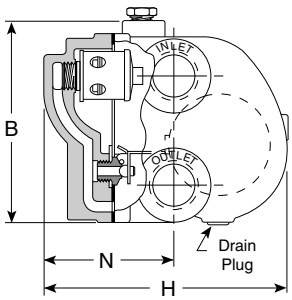
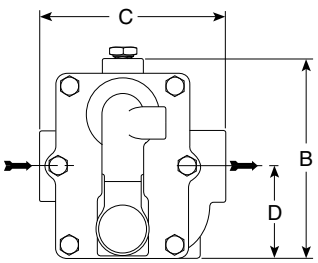
A & AI Series Float & Thermostatic Steam Traps

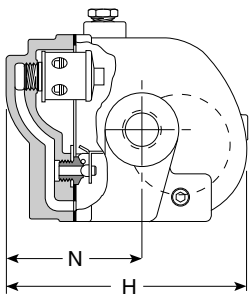
Cast Iron for Horizontal Installation, with Thermostatic Air Vent
For Pressures to 12 bar...Capacities to 3 900 kg/h





Model A Traps





Model AI Traps

Description

Armstrong A & AI Series F&T traps are for industrial service from 0 to 12 bar and feature a balanced pressure phosphor-bronze type bellows caged in stainless steel. Armstrong A & AI Series F&T traps are designed for service on heat exchange equipment where there is a need to vent air and non-condensable gases quickly.

The AI Series F&T traps feature the convenience of in-line connections with the same rugged internals found in the A Series.

Maximum Operating Conditions

Maximum allowable pressure (vessel design): 12 bar @ 192°C

Maximum operating pressure:

Model 30-A, AI:	2 bar saturated steam
Model 75-A, AI:	5 bar saturated steam
Model 125-A, AI:	8,5 bar saturated steam
Model 175-A, AI:	12 bar saturated steam

Maximum back pressure: 99% of inlet pressure

Note: Cast iron traps should not be used in systems where freezing, excessive hydraulic or thermal shock are present.

Connections

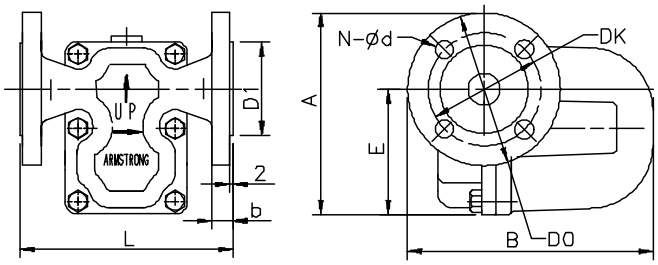
AIC Series DN15-25 Float & Thermostatic Steam Trap

Nodular Cast Iron (GS) for Horizontal Installation, with Thermostatic Air Vent
For Pressures to 14 bar...Capacities to 900 kg/h



Description

Armstrong AIC Series F&T traps are designed for industrial service to 14 bar. They feature all the benefits of Armstrong F&T traps, such as operation against back pressure, continuous drainage, high-capacity venting of air and CO_2, long life and dependable service and enjoys the convenience of in-line connections.

Armstrong AIC Series F&T traps are the perfect solution for applications where there is a need to vent air and non-condensable gases quickly at start-up.

Maximum Operating Conditions

Maximum allowable pressure (vessel design):	17 bar @ 232°C
Maximum Allowable Pressure:	17 barg (AICF model is limited to PN16)
Maximum Allowable Temperature:	232°C
Maximum Operating Pressure:	14 barg

Note: Float & Thermostatic steam traps should not be used in systems where freezing or excessive hydraulic shocks can occur.

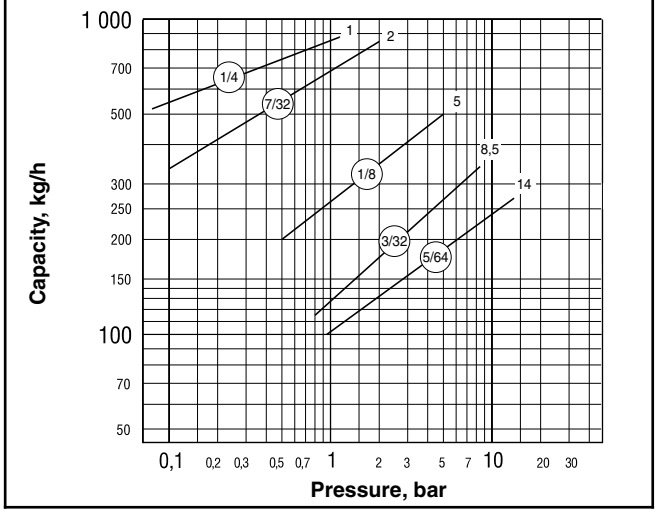
AIC Series DN15-25 Float & Thermostatic Steam Trap

Nodular Cast Iron (GS) for Horizontal Installation, with Thermostatic Air Vent

For Pressures to 14 bar...Capacities to 900 kg/h

Table ST-125-1. Model AIC DN15-25 – Capacity Chart



Options

Vacuum Breaker

Many times, condensate will be retained ahead of steam traps because of the presence of a vacuum. To break a vacuum, air must be introduced into the system by means of a vacuum breaker.

For maximum protection against freezing and water hammer in condensing equipment under modulated control, vacuum breakers are recommended. Armstrong A and AI Series F&T Traps are available with integral vacuum breakers. Maximum service pressure is 10 bar.

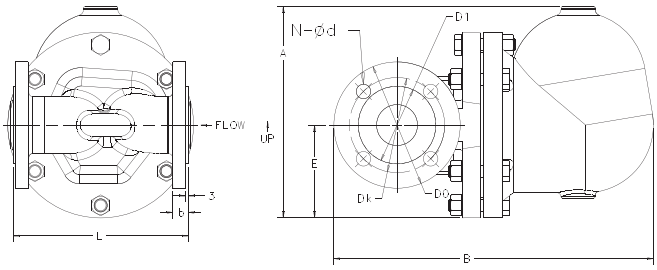
Specification

The steam trap shall be an Armstrong model AIC (AICF) float & thermostatic type. Cap and body shall be EN-GJS-400-15 (EN1563) Nodular Iron. Pipe connections shall be in the cap and the entire mechanism attached to the cap. Float and seat shall be stainless steel with heat-treated chrome steel valve. The float shall be Heliarc welded to avoid introduction of dissimilar metals. The thermostatic Air Vent shall be a balanced pressure Hastelloy wafer with chrome steel seat. Maximum allowable back pressure should be 99% of the inlet pressure.

All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.

AIC Series DN40-50 Float & Thermostatic Steam Trap

Nodular Cast Iron (GS) for Horizontal & Vertical Installation, with Thermostatic Air Vent
For Pressures to 32 bar... Capacities to 27 250 kg/h



Description

Armstrong AIC Series F&T traps are designed for industrial service up to 32 bar. They feature all the benefits of Armstrong F&T traps, such as operation against back pressure, continuous drainage, high-capacity venting of air and CO_2, long life and dependable service and enjoys the convenience of in-line connections.

Armstrong AIC Series F&T traps are the perfect solution for applications where there is a need to vent air and non-condensable gases quickly at start-up.

Maximum Operating Conditions

Maximum allowable pressure (vessel design):	40 bar @ 300°C
Maximum Allowable Pressure:	40 barg
Maximum Allowable Temperature:	300°C
Maximum Operating Pressure:	32 barg

Note: Float & Thermostatic steam traps should not be used in systems where freezing or excessive hydraulic shocks can occur.

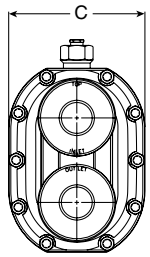
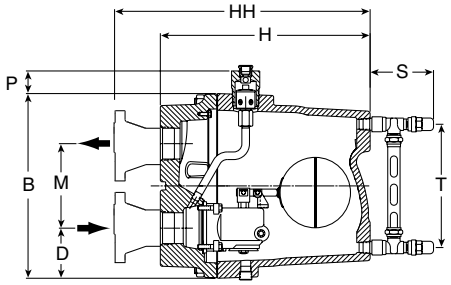
JD & KD Series Ultra-Capacity Float & Thermostatic Steam Traps

Ductile Iron for Horizontal Installation, with Thermostatic Air Vent

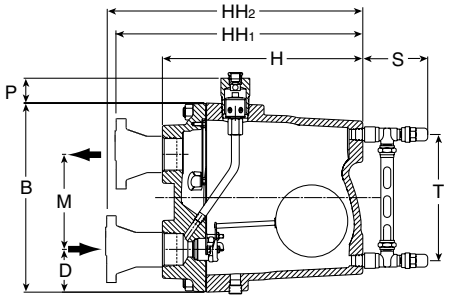
For Pressures to 21 bar...Capacities to 64 400 kg/h



Series JD & KD Cap



Series JD, F&T Shown



Series KD, F&T Shown

Description

The simple, yet rugged, ductile iron construction of the JD & KD Series Ultra-Capacity F&T steam traps offers long, trouble-free service. All floats, valves and seats, and lever mechanisms are constructed of stainless steel.

The integral thermostatic air vent is a balanced-pressure phosphor bronze bellows caged in stainless steel. It is designed especially for heavy-duty industrial applications where highly efficient, uninterrupted service is essential. This balanced-pressure-type air vent will respond to the pressure-temperature curve of steam at any pressure from zero to 21 bar. Thus – up to 21 bar – air is vented at slightly below steam temperature.

Maximum Operating Conditions

Maximum allowable pressure (vessel design):

Model JD & KD	21 bar @ 343°C

Maximum operating pressure:

Model 15-JD:	1 bar saturated steam
Model 20-JD:	1,4 bar saturated steam
Model 30-JD:	2 bar saturated steam
Model 75-JD:	5 bar saturated steam
Model 125-JD:	8,5 bar saturated steam
Model 175-JD:	12 bar saturated steam
Model 250-JD:	17 bar saturated steam
Model 300-JD:	21 bar saturated steam
Model 30-KD:	2 bar saturated steam
Model 50-KD:	3,5 bar saturated steam
Model 300-KD:	21 bar saturated steam

Maximum back pressure: 99% of inlet pressure

Maximum operating temperature bellows: 217°C

Connections

Screwed BSPT and NPT

Flanged DIN or ANSI (screw on)

Materials

Body and cap:	ASTM A395 ductile iron
Internals:	All stainless steel – 304
Valve(s) and seat(s):	Stainless steel
Drain plug:	Carbon steel
Thermostatic air vent:	Stainless steel and bronze with phosphor bronze bellows, caged in stainless steel

Options

- Integral vacuum breaker 10 bar maximum. Add suffix VB to model number
- No internal thermostatic air vent for liquid drainer service. Add suffix LD to model number
- Integral flash release for syphon drainage service. Add suffix CC to model number
- Armored gauge glass 17 bar @ 218°C

Specification

Float and thermostatic steam trap, type ... in ductile iron, with thermostatic air vent. Maximum allowable back pressure 99% of inlet pressure.

How to Order

Pressure	Model	Connection Size	Option
75	JD	8	VB
15 20 30 75 125 175 250 300	JD	8 = DN50	VB = Vacuum Breaker LD = Liquid Drainer CC = Condensate Controller GG = Gauge Glass
30	KD	8 = DN50	
50		10 = DN65	
300		12 = DN80	

Special Configurations

Condensate controller with flash release for syphon drainage and/or cascade service. The condensate controller (CC) configuration was developed especially to meet very large capacity needs in applications where condensate must be lifted from the drain point to the trap. Under such conditions – often referred to as syphon drainage – the reduction in pressure that occurs when the condensate is elevated causes a portion of the condensate to flash into steam. Ordinary traps, unable to differentiate between flash steam and live steam, close and impede drainage.

The JD & KD Series condensate controllers (CC) are equipped with a fixed, restricted orifice near the top of the body to bleed off the flash steam (and all air present). This permits the trap to function properly on condensate.

Liquid drainer with back vent for exceptionally high-capacity drainage of liquid from gas under pressure. The liquid drainer (LD) configuration was developed to meet very large capacity needs in draining water and other liquids from air or other gases under pressure. To prevent air or gas binding, the access port in the top of the body serves as a back vent connection to the equipment being drained. For capacity data, see pages LD-439 and LD-462 or consult your Armstrong Representative.

Table ST-129-3. Model 300-KD10 Capacity

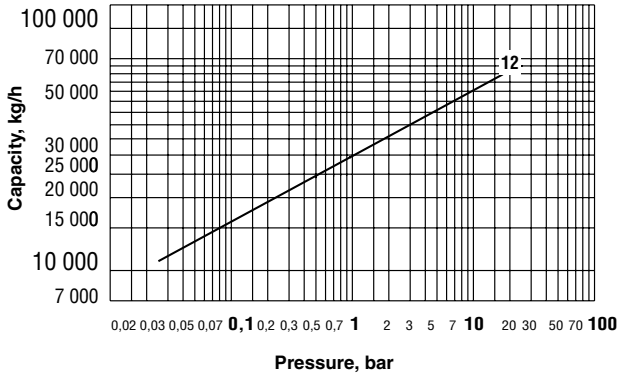

Table ST-129-4. Model 300-KD12 Capacity

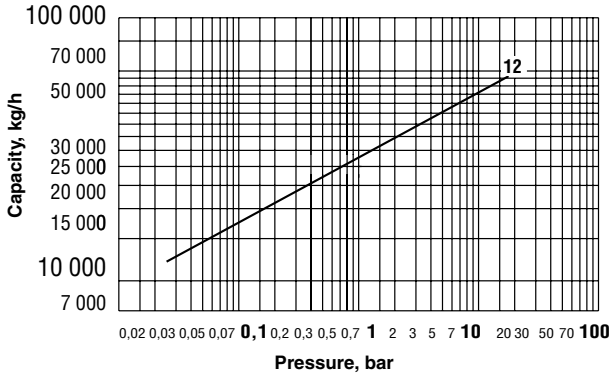

Options

Vacuum Breaker – 1/2" NPT

Many times, condensate will be retained ahead of steam traps because of the presence of a vacuum. To break a vacuum, air must be introduced into the system by means of a vacuum breaker.

For maximum protection against freezing and water hammer in heating coils under modulated control, for example, vacuum breakers are recommended in conjunction with freeze protection devices.

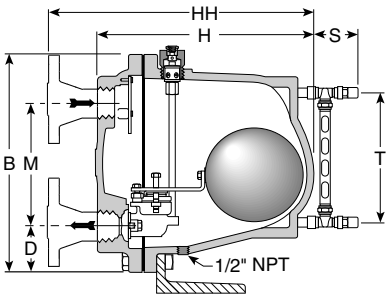
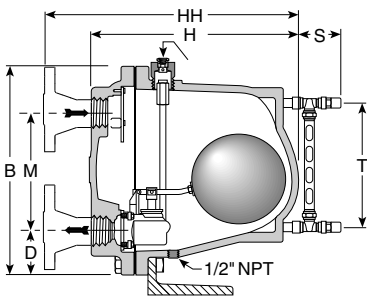
L & M Series Ultra-Capacity Float & Thermostatic Steam Traps

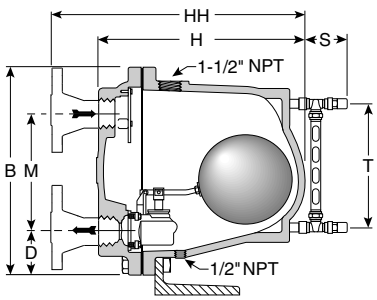
Cast Iron for Horizontal Installation, with Thermostatic Air Vent
For Pressures to 17 bar...Capacities to 94 350 kg/h



Series L, F&T Shown



Series M, CC Shown



Series M, LD Shown

Description

The simple yet rugged cast iron construction of the L & M Series Ultra-Capacity F&T steam traps offers long, trouble-free service. All floats, valves and seats, and lever mechanisms are constructed of stainless steel.

The integral thermostatic air vent is a balanced-pressure phosphor bronze bellows caged in stainless steel. It is designed especially for heavy-duty industrial applications where highly efficient, uninterrupted service is essential. This balanced pressure type air vent will respond to the pressure-temperature curve of steam at any pressure from zero to 17 bar. Thus – up to 17 bar – air is vented at slightly below steam temperature.

Maximum Operating Conditions

Maximum allowable pressure (vessel design):
- Model L: 17 bar @ 232°C
- Model M: 17 bar @ 232°C

Maximum operating pressure:
- Model 30-L: 2 bar saturated steam
- Model 100-L: 7 bar saturated steam
- Model 150-L: 10 bar saturated steam
- Model 250-L: 17 bar saturated steam
- Model 250-M: 17 bar saturated steam

Maximum back pressure: 99% of inlet pressure
Maximum operating temperature bellows: 217°C

Note: Cast iron traps should not be used in systems where freezing, excessive hydraulic or thermal shock are present.

Connections

Screwed BSPT and NPT
Flanged DIN or ANSI (screw on)

Materials

Body and cap:	ASTM A48 Class 30
Internals:	All stainless steel – 304
Valve(s) and seat(s):	Stainless steel
Drain plug:	Carbon steel
Thermostatic air vent:	Stainless steel and bronze with phosphor bronze bellows, caged in stainless steel

Options

- Integral vacuum breaker 10 bar maximum. Add suffix VB to model number
- No internal thermostatic air vent for liquid drainer service. Add suffix LD to model number
- Integral flash release for syphon drainage service. Add suffix CC to model number
- Armored gauge glass 17 bar @ 218°C
- L and M Series available with floor mounting bracket. Consult factory.

Specification

Float & thermostatic steam trap, type ... in cast iron, with thermostatic air vent. Maximum allowable back pressure 99% of inlet pressure.

How to Order

Pressure	Model	Connection Size	Option
250	**M**	**12**	**GG**
30 = 2 bar 100 = 7 bar 150 = 10,5 bar 250 = 17 bar	L	8 = DN50 10 = DN65	VB = Vacuum Breaker LD = Liquid Drainer CC = Condensate Controller G/G = Gage Glass
250 = 17 bar	M	12 = DN80	

Special Configurations

Condensate controller with flash release for syphon drainage and/or cascade service. The condensate controller (CC) configuration was developed especially to meet very large capacity needs in applications where condensate must be lifted from the drain point to the trap. Under such conditions – often referred to as syphon drainage – the reduction in pressure that occurs when condensate is elevated causes a portion of the condensate to flash into steam. Ordinary traps, unable to differentiate between flash steam and live steam, close and impede drainage.

The L & M Series condensate controllers (CC) are equipped with a fixed, restricted orifice near the top of the body to bleed off the flash steam (and all air present). This permits the trap to function properly on condensate.

Liquid drainer with back vent for exceptionally high capacity drainage of liquid from gas under pressure. The liquid drainer (LD) configuration was developed to meet very large capacity needs in draining water and other liquids from air or other gases under pressure. To prevent air or gas binding, the access port in the top of the body serves as a back vent connection to the equipment being drained. For capacity data, see pages LD-439 and LD-462 or consult your Armstrong Representative.

L & M Series Ultra-Capacity Float & Thermostatic Steam Traps

Cast Iron for Horizontal Installation, with Thermostatic Air Vent
For Pressures to 17 bar...Capacities to 94 350 kg/h

Table ST-131-1. L Series Capacity

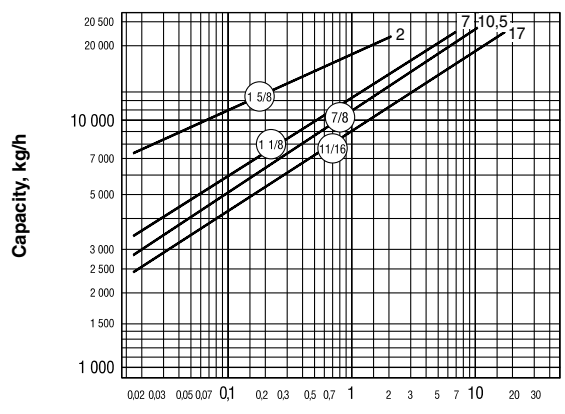

Table ST-131-2. M Series Capacity

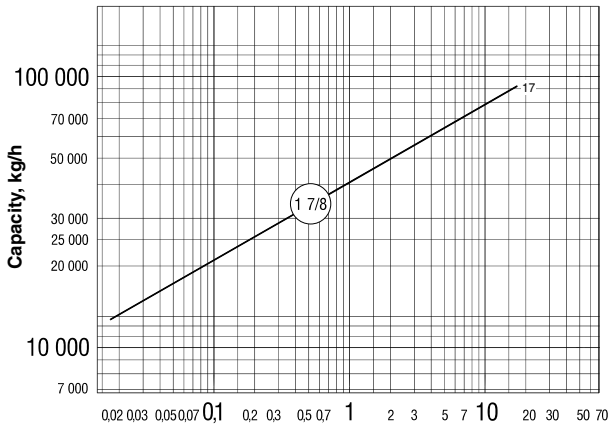

Installation Notes

Under conditions where the load may approach the maximum capacity of the trap, it is recommended that the size of the discharge line be increased one size as close to the trap cap as is practical. When L and M Series units are used in severe service conditions or at pressures exceeding 2 bar, use an anchoring bracket or other supportive measures to minimize stress on piping.

Ultra-Capacity L and M Series units MUST BE WARMED UP in the proper sequence and gradually. Recommended warm-up rate – not to exceed 55°C/8 minutes.

See your Armstrong Representative.

Vacuum Breaker – 3/8'' and 1/2'' NPT
Many times, condensate will be retained ahead of steam traps because of the presence of a vacuum. To break a vacuum, air must be introduced into the system by means of a vacuum breaker.

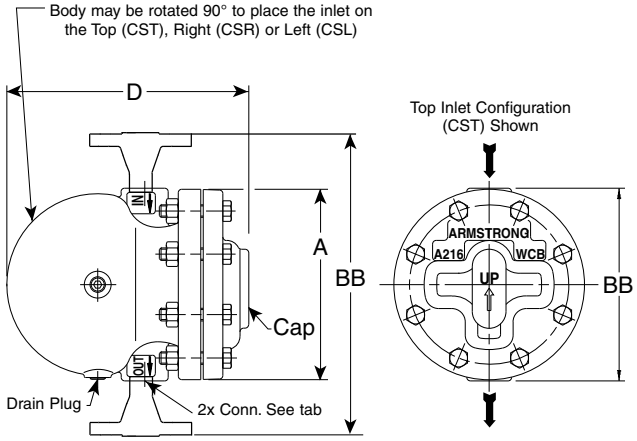
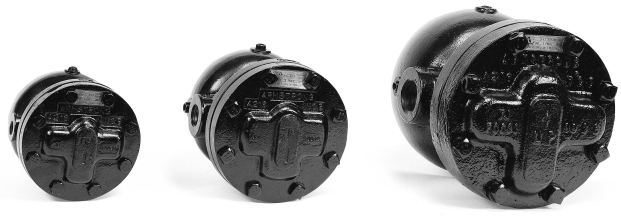
CS Series Float & Thermostatic Steam Traps

Carbon Steel for Horizontal or Vertical Installation, with Thermostatic Air Vent

For Pressures to 32 bar...Capacities to 6 030 kg/h





Description

The simple yet rugged construction of the CS Series Carbon Steel Float and Thermostatic Trap is designed to assure long, trouble-free service. The CS Series offers horizontal or vertical piping configurations from the same trap. Additionally, in-line repairability is very easy because the cap and mechanism detach quickly while the body stays in-line. For added versatility a full range of connection sizes are offered 1/2" through 2" in NPT, socketweld and flanged.

Benefits

- Horizontal or Vertical piping arrangements are available from the same trap
- Inlet and outlet connections are in the body for easy in-line repairability
- More connection sizes available

Maximum Operating Conditions

Maximum allowable pressure (vessel design):	41 bar @ 343°C
Maximum operating pressure:	32 bar
Maximum back pressure:	99% of inlet pressure

Materials

Body and Cap:	ASTM A216 WCB
Internals:	All stainless steel
Valve(s) and Seat(s):	Stainless steel
Drain Plug:	Carbon steel
Thermostatic Air Vent:	Wafer type stainless steel with Hastelloy element

Connections

Screwed BSPT and NPT
Socketweld
Flanged DIN or ANSI (welded)

Specification

Steam traps shall be float and thermostatic type having carbon steel cap and body, stainless steel valve and seat and stainless steel float. Piping connections shall be in the trap body and shall be capable of being horizontal with the inlet on either side or vertical with the inlet on top. Cap with mechanism shall be completely removable without disturbing the piping. Integral thermostatic element shall be wafer type constructed of Hastelloy and stainless steel. Thermostatic element shall be capable of withstanding 25°C of superheat and resistant to water hammer damage. Maximum allowable back pressure 99% of inlet pressure.

How to Order

Pressure	Model	Inlet Flow Direction	Connection Size	Connection Type
*	CS	T	2	NPT
*	CS = Carbon Steel	T = Vertical Top Inlet R = Horizontal Right Inlet L = Horizontal Left Inlet	2 = DN15 3 = DN20 4 = DN25 5 = DN32 6 = DN40 8 = DN50	BSPT, NPT, SW and Flanged (Specify Flange Type and Rating)

* Refer to capacity charts for maximum operating pressures

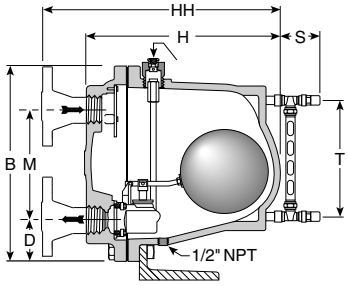
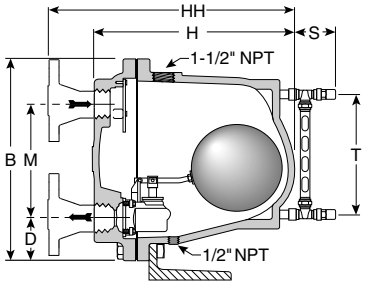
Series LS, F&T Shown



Series MS, CC Shown



Series MS, LD Shown

Description

The simple yet rugged cast steel construction of the LS & MS Series Ultra-Capacity F&T steam traps offers long, trouble-free service. All floats, valves and seats, and lever mechanisms are constructed of stainless steel.

The integral thermostatic air vent is a balanced-pressure phosphor bronze bellows caged in stainless steel. It is designed especially for heavy-duty industrial applications where highly efficient, uninterrupted service is essential. This balanced-pressure air vent will respond to the pressure-temperature curve of steam at any pressure from zero to 17 bar. Thus – up to 17 bar – air is vented at slightly below steam temperature.

Maximum Operating Conditions

Maximum allowable pressure (vessel design):

Model LS:	31 bar @ 338°C
Model MS:	31 bar @ 338°C

Maximum operating pressure:

Model 30-LS:	2 bar saturated steam
Model 100-LS:	7 bar saturated steam
Model 150-LS:	10 bar saturated steam
Model 250-LS:	17 bar saturated steam
Model 250-MS:	17 bar saturated steam
Model 450-LS:	31 bar saturated steam
Model 450-MS:	31 bar saturated steam

Maximum back pressure: 99% of inlet pressure

Maximum operating temperature bellows: 217°C
Note: For pressures above 17 bar, the thermostatic vent should be removed and only a CC or LD version should be used.

Connections

- Screwed BSPT and NPT
- Socketweld
- Flanged DIN or ANSI (welded)

Materials

Body and cap:	ASTM A216 WCB
Internals:	All stainless steel – 304
Valve(s) and seat(s):	Stainless steel
Drain plug:	Carbon steel
Thermostatic air vent:	Stainless steel and bronze with phosphor bronze bellows, caged in stainless steel

Options

- Integral vacuum breaker 10 bar maximum. Add suffix VB to model number.
- No internal thermostatic air vent for liquid drainer service. Add suffix LD to model number.
- Integral flash release for syphon drainage service. Add suffix CC to model number.
- Armored gauge glass 17 bar @ 218°C
- LS and MS Series available with floor mounting bracket. Consult factory.

Specification

Float and thermostatic steam trap, type ... in cast steel, with thermostatic air vent. Maximum allowable back pressure 99% of inlet pressure.

All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.

LS & MS Series Ultra-Capacity Float & Thermostatic Steam Traps

Cast Steel for Horizontal Installation, with Thermostatic Air Vent
For Pressures to 31 bar...Capacities to 127 000 kg/h

Table ST-135-1. LS Series Capacity

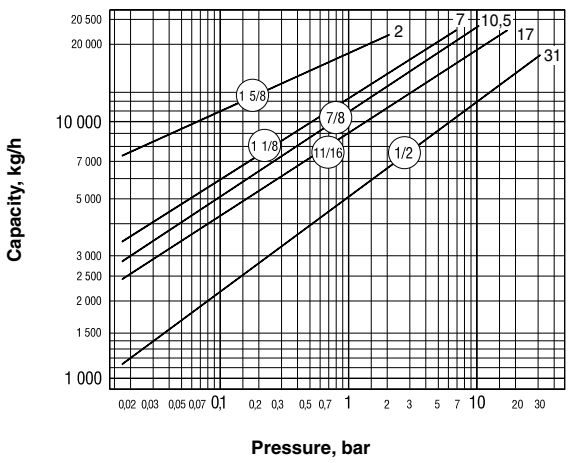

Table ST-135-2. MS Series Capacity

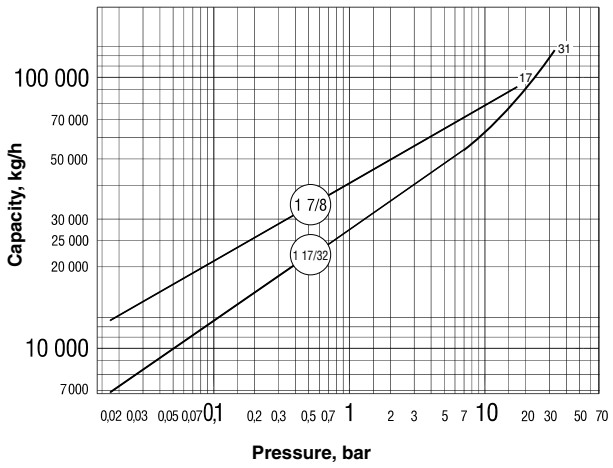

Special Configurations

Condensate controller with flash release for syphon drainage and/or cascade service. The condensate controller (CC) configuration was developed especially to meet very large capacity needs in applications where condensate must be lifted from the drain point to the trap. Under such conditions – often referred to as syphon drainage – the reduction in pressure that occurs when condensate is elevated causes a portion of the condensate to flash into steam. Ordinary traps, unable to differentiate between flash steam and live steam, close and impede drainage.

The LS & MS Series condensate controllers (CC) are equipped with a fixed, restricted orifice near the top of the body to bleed off the flash steam (and all air present). This permits the trap to function properly on condensate.

Liquid drainer with back vent for exceptionally high capacity drainage of liquid from gas under pressure. The liquid drainer (LD) configuration was developed to meet very large capacity needs in draining water and other liquids from air or other gases under pressure. To prevent air or gas binding, the access port in the top of the body serves as a back vent connection to the equipment being drained. For capacity data, see pages LD-439 and LD-462 or consult your Armstrong Representative.

How to Order

Pressure	Model	Connection Size	Option
100	**LS**	**10**	**VB**
30 = 2 bar 100 = 7 bar 150 = 10,5 bar 250 = 17 bar 450 = 31 bar	LS	8 = DN50 10 = DN65	VB = Vacuum Breaker LD = Liquid Drainer CC = Condensate Controller G/G = Gage Glass
250 = 17 bar 450 = 31 bar	MS	12 = DN80	

Installation Notes

Under conditions where the load may approach the maximum capacity of the trap, it is recommended that the size of the discharge line be increased one size as close to the trap cap as is practical.

When LS and MS Series units are used in severe service conditions or at pressures exceeding 2 bar, use an anchoring bracket or other supportive measures to minimize stress on piping.

Ultra-Capacity LS and MS Series units MUST BE WARMED UP in the proper sequence and gradually. Recommended warm-up rate not to exceed 55°C/8 minutes.

See your Armstrong Representative.

Vacuum Breaker – 3/8'' and 1/2'' NPT
Many times, condensate will be retained ahead of steam traps because of the presence of a vacuum. To break a vacuum, air must be introduced into the system by means of a vacuum breaker.

For maximum protection against freezing and water hammer in heating coils under modulated control, for example, vacuum breakers are recommended in conjunction with freeze protection devices.

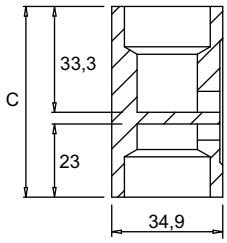
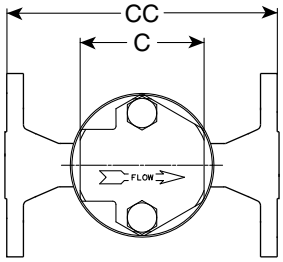
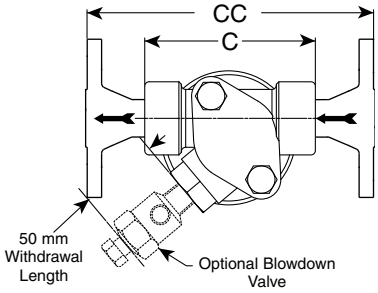
F&T-2000 Float & Thermostatic Steam Trap

All Stainless Steel with 360° Connector

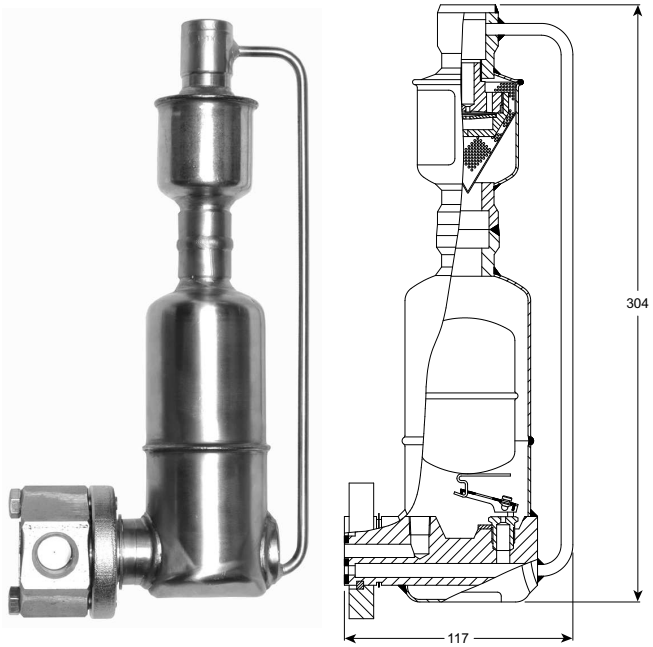
For Pressures to 18 bar...Capacities to 600 kg/h







Armstrong's F&T-2000 Float and Thermostatic Steam Trap has a mechanical principal of operation. The float inside the trap follows the condensate level, thus opening and closing the discharge valve. Non-condensable gases accumulate at the top of the trap and are discharged by the wafer thermostatic air vent. This one is located over the main body, thus air volume does not limit condensate level inside of the trap and allows better real-life capacities than for other F&T designs.



Features

- Compact and lightweight
- Corrosion resistant stainless steel assembly
- Integral strainer on the air vent
- Easy to install and replace
- Universal connector allows flexibility
- Multiple pipe sizes and connections available

Armstrong's F&T-2000 has a sealed, stainless steel body that is lightweight, compact and highly resistant to corrosion. It is piped through the Armstrong 360° Universal Connector or Trap Valve Station (TVS). This makes it easy to install and replace, as the trap can be removed while the connector remains in-line. The result is savings in labor cost and increasing in flexibility, as other trap types (Inverted Bucket, Bimetallic, Thermostatic and Thermodynamic) can be installed on the same connector.

Maximum Operating Conditions

Maximum allowable pressure
(vessel design): 25 barg @ 350°C
Maximum operating pressure: 18 barg (orifice #38)

Connections

- Screwed BSPT and NPT
- Socketweld
- Flanged DIN or ANSI (welded)

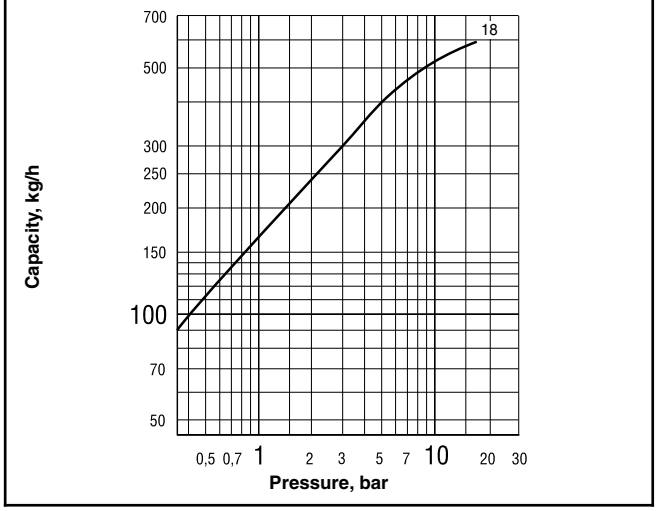
F&T-2000 Float & Thermostatic Steam Trap

All Stainless Steel with 360° Connector

For Pressures to 18 bar...Capacities to 600 kg/h

Table ST-137-1. Model F&T-2000 Capacity



Options

Blowdown valve – IS-2 connector only
Plug for IS-2 strainer blowdown connection

How to Order

Specify:

- Size and type of pipe connection
- Type of 360° connector (with or without strainer)
- Any options required

Specification

Float and thermostatic steam trap, type F&T-2000 in stainless steel, with thermostatic air vent. Piped through 360° Universal Connector or Trap Valve Station (TVS). Maximum allowable back pressure 99% of inlet pressure.

FT-4000 Series Float and Thermostatic Steam Trap

All Stainless Steel
For Pressures to 32 bar… Capacities to 490 kg/hr

Description

With the FT-4000 Series, you can install a float and thermostatic trap in any piping configuration with little or no repiping. You get the reliability of the float and thermostatic operating principle, plus all the benefits of all-stainless steel construction.

- A sealed, tamperproof package
- A compact, lightweight trap
- Exceptional corrosion resistance
- A one-year guarantee against defective materials and workmanship

FT-4000 Series Float & Thermostatic steam traps combine savings in three important areas: energy, installation and replacement. Mounting the FT-4000 on universal connectors with integral strainers provides quick, easy in-line replacement with added protection from dirt and scale.

Maximum Operating Conditions

Maximum allowable pressure (vessel design):
33 bar @ 315°C

Maximum operating pressure:

Model FT-4075:	5 bar saturated steam
Model FT-4150:	10 bar saturated steam
Model FT-4225:	16 bar saturated steam
Model FT-4300:	21 bar saturated steam
Model FT-4465:	32 bar saturated steam

Materials

Body:	ASTM A240 Grade 304L
Internals:	All stainless steel – 304
Valve and seat:	Stainless steel
Thermostatic air vent:	Wafer type-stainless steel with Hastelloy element

Specification

Steam trap shall be float and thermostatic type having stainless steel construction, stainless steel valve, seat and float, for use on an IS-2 connector with integral strainer or TVS-4000 trap valve station. Integral thermostatic element shall be wafer type constructed of Hastelloy and stainless steel. Thermostatic element shall be capable of withstanding 25°C of superheat and be resistant to water hammer damage.

How to order

- Specify model number
- Select 360° connector style (IS-2 or TVS 4000)
- Specify maximum working pressure that will be encountered or orifice size
- Specify any options required

Table ST-138-1. Model FT-4000 Series Capacity
